FirstShot includes proteins, beneficial bacteria, intestinal energy sources and unique formula that helps maintain in testinal health during times of stress in the newborncalf. For optimum results, feed to calves 24 hours after birth or later and following periods of stress.

Highly palatable • Contains amino acid glycine is a unique proprietary blend of yeast extract and dextran to help maintain gut health.

Feeding Instructions: Depending on severity of stress, feed 20 g, 40 g or 60g orally on the back of the tongue. For best results, start feeding First Shot 24 hours after birth. Repeat as needed.

ImunoActive Gel

gel for stronger immunity

On the best way, vitamins and essential oils encourage the creation of immunity, protect animal health and provide support in the treatment of sick animals. ImunoActive is applied in all conditions where is necessary to strengthen the immune system, acute and chronic illness, convalescence, allergies, etc. ImmuoActive is recommended to all situations where immunity decline is expected such as stressful events insomnia, nervosa, aggression, reinforced activity during hunting or competition (exhibition).

VitalPlus Gel

energy supplement with vitamins

VitalPlus should be administered when the animals are weak, exhausted or not able to suckle enough colostrum (neonatal animals). Animals that do not consume food because of non vitality and hypothermia by taking VitalPlus will receive the required energy through the medium chain fatty acids contents in palm, sesame and line oil. These oils are very rich of omega 3, 6, 9 essential fatty acids and antioxidants. These entire components are essential for growth of the organism, and ensure proper animal health. Vitamin complex A, D3, E, C and K are added to Vital plus to enhance and facilitate of the animal growth and development, especially in the conditions of illness and convalescence. They are very important to ensure the immunity creation and overall resistance of the organism. Product should be administrated also to animals after surgery, or any other situation that cannot eat, or food intake is reduced or prevented.

CalciTonic Gel

Ca, Mg, prevetic for milk fever

CalciTonic is an effective aid in the prevention and treatment of milk fever in cattle. CalciTonic may be given to cows: before calving to help prevention of the occurrence of milk fever and as following treatment with injectable calcium borogluconate to reduce the possibility of relapse. The calcium chloride is rapidly absorbed following oral administration. Within 45 minutes significantly elevated blood calcium levels are achieved which are maintained for up to 14 hours. Calcium gluconate helps connection calcium with phosphorus. The magnesium content assists where mild hypomagnesaemia may coexist with hypocalcaemia. Vitamin D3 regulates calcium and phosphorus metabolism and promotes their absorption in the intestine, controls the excretion by the kidneys and the storage in the skeleton as well.

VetCalm Gel

anti stress and calming gel

VetCalm Gel with its balanced mixtures of essential oils and herbs acts against stress and anxiety. Melissa and Valeriana have been used both traditionally and contemporaneously as mild sedatives, anxiolytics and tranquilizers. Animals are relaxed but not sedated. It helps to reduce stress, and makes animals more calms in stages of the periods of intensified stress such as transport, temperature, veterinary procedures.

Aspiveto Gel

Analgetic, antipiretic, atiinflammation gel

Aspiveto contains natural origin methyl- salicylate, substance with antipyretic, analgesic and anti-inflammatory effects. As an abundant source of natural salicin it prevents the production of prostaglandins, which caused inflammatory response. It has been used as an herbal remedy for pains, edema and redness, facilitation of the movement joint, and many types of inflammation. It is widely recommended in the treatment of acute and chronic pain, arthritis and tendinitis, elevated temperatures. It does not cause any changes in the stomach, intestines or liver.
