ThymoVetGel

natural thymol in gel

QUALITATIVE AND QUANTITATIVE COMPOSITION: 50ml : Thymol 12.5 g/ gel for honeybees , xanthan gum, excipients up to 50ml

Product is for treatment of varroosis due to Varroa destructor.

Do not treat during honey flow to avoid potential taste tainting. The treatment can be performed immediately after the removal of the supers.

Do not use the product when the maximum daily temperature expected during the treatment is lower than 15°C or when the colony activity is very low or when temperature is above 40°C. All colonies of an apiary should be treated simultaneously.

Insert 50ml of gel on many places of beehive. After two weeks repeat treatment.

The efficacy of the product is maximised if the product is used in late summer after the honey harvest (when the amount of bee brood present is diminishing). However, in the case of severe infestations, the product can also be used during springtime, when temperatures are above 15°C.

Efficacy may vary between colonies due to the nature of the application. Therefore, Apiguard should be used as one treatment among others within an Integrated Pest Management programme, and mitefall regularly monitored. If further significant mite fall is observed during the following Winter or Spring, it is recommended to use an additional secondary Winter or Spring treatment for varroa.

Withdrawal period(s) Honey: zero days. Do not use during honey flow. Presentation : 50ml
