ApiOxal

oxalic acid solution

Ingredient : oxalic acid 5%, sacharoses 20% , propilen glycol, PW up to 100ml

ApiOxal, a product based on oxalic acid, has long been used in the treatment of varroa. It belongs to ecological agents, which is especially emphasized in contemporary beekeeping.

Dosage: Trickle 5ml of the prepared solution onto each brood-frame of bees Treatment period: WINTER (little or no brood)

SPRING (swarms & shook swarms) SUMMER (blocked egg-laying) Whenever needed to reduce Varroa infestation levels

Winter treatment is the basis and mandatory to ensure healthy bees in spring.

USAGE ADVICE : When handling the product whether preparing the solution use gloves and glasses.

- Treat all colonies in the apiary at the same time to discourage robbing
- For summer treatment stop the queen laying for 25 days prior to treatment

STORAGE MODES: Store the product in a cool and dark place, out reach of children. Presentation : 100ml
