

# OregoMix

Feed additives for animals in powder

## COMPOSITION:

Natural components:

- Oregano
- Thyme
- Sage
- Echinacea
- Garlic
- Rosemary

OregoMix formulation is a mixture of ennobled professionally selected herbs essential oils and tinctures, 100% natural origin from plants of demonstrated effects on a large number of bacteria, virus and fungi that affect the animal health. It is very effective in preventing and combating diarrhea. There is very bactericidal effect. The composition of plant extracts effectively stimulates appetite, growth and feed conversion. Systematic use OregoMix reduces the occurrence of disease.

**USE:** OregMix is used for reducing the incidence of diarrhea, the prevention of coccidiosis, salmonellosis, colliobacteriosis, and bacterial diseases, in growth, appetite enhancement, increases the utilization of feed, as a stimulator of the immune system, reduction of the level of ammonia.

OregoMix is a safe herbal phytobiotic - a digestive enhancing product, promotes the use of animal feed components, the development of internal organs, skeleton, muscles, joints and immune system. Its use leads to better tolerance to stress, healthier, animals are uniform and more resistant to infection. It is effective against most common microorganism which cause gastrointestinal problems (For example, E. coli, Salmonella ssp, Enterobacteria, Treponema hyodysenteriae) for the treatment and prevention of non-specific enteritis, gastro-intestinal infections and diarrhea caused by microorganisms sensitive coccidias.. Product can be effectively used against most of the Eimeria species (coccidiosis) and fungi (such as Candida albicans). A large number of experiences show that Oregomix is effective in bacterial respiratory diseases.

## APPLICATION:

For the prevention and increase the yield: use treatment dose of 7 days (eg. Poultry after hatching), after delivery animals, the purchase of new animals, fattening phase change, and then use a preventive dose every 2nd week, or once a week dose of treatment. 7 days before and 7 after changing food, use a prevention dose (14 days). If the symptoms of the disease appear repeat the treatment.
