

FirstGel piglet

gel supplement with probiotic and prebiotic for one day piglets for head start and digestive decrease occur of diarrhea and energy booster

FirstGel is the first choice for farmers who want to give their newborn piglets a head start.

FirstGel effective composition

It is made from concentrated vitamins A, D3, E, C, K, with Omega 3, 6, 9, fatty acids and probiotics Bacillus, Lactobacillus Saccharomyces and Inulin (prebiotic) gets the newborn up and nursing faster, giving it the head start it needs.

Product for healthy, high - performance piglets

They improve organism immunity to bacterial infections and favour colonisation of positive bacterial flora repeat application in next 6-12 hours.

Older Piglets

Fighting against diarrhea and stress as cause of many disorders in older piglets, best solution is FirstGel -application 25ml, twice a day, 3-5 days

FirstGel is convenient and easy to use

FirstGel comes in syringe tubes ready to use. No pails, no mixing and no feeding tubes. Dose per piglet is 2ml. Just put the tip on the the back of the piglet's tongue and plunger slowly, insert gel. It is a good idea to carry a couple of tubes of FirstGel in your pocket every time you check piglets pens.

FirstGel is the right dosage

FirstGel concentrate formulation in 2ml dose helps newborn piglets get started without filling them up , so they are willing for suckling
